SUBJECT INDEX

Androgen(s)
  receptor(s)
    mediated growth control of breast cancer and endometrial cancer modulated by antiandrogen- and androgen-like steroids, 113
Anti-androgen
  effect of, in breast and endometrial cancers, 113
Aromatase
  control and biological importance of intratumoral, in breast cancer, 145
  identification and characterization of transcriptional regulatory elements of the human aromatase cytochrome P450 gene *CYP*19, 151
  inhibition of, in the brain during development, 201

Brain
  regulation of sex-specific formation of oestrogen in, development: endogenous inhibitors of aromatase, 201
Breast cancer
  androgen receptor mediated growth control of, modulated by antiandrogen- and androgen-like steroids, 113
  control and biological importance of intratumoral aromatase in, 145
  progesterone receptor A and B protein expression in human, 93
  role of the estrogen receptor in tumor progression in, 87

Central Nervous System
  mineralocorticoid receptors in, 179
Chromatin
  interaction of steroid hormone receptors with transcription factors involves, remodelling, 13
Cytochrome P450
  -dependent enzymes as targets for prostate cancer therapy, 133
  identification and characterization of transcriptional regulatory elements of the human aromatase, gene *CYP*19, 151

1α,25-Dihydroxyvitamin D_3
  differing shapes of, function as ligands for the D-binding protein, nuclear receptor and membrane receptor, 13

Endometrial cancer
  androgen receptor mediated growth control of, modulated by antiandrogen- and androgen-like steroids, 113
Estrogen(s)
  mechanisms of, action during neural development, 169
  regulation of sex-specific formation of, in brain development, 201
  receptor(s)
    alternative splicing of the, primary transcript normally occurs in, -positive tissues and cell lines, 99
    role of the, in tumor progression, 87

Growth factors
  role of, in the regulation of human prostatic tumor growth, 107

hsp90
  involvement of, in the assembly of progesterone receptor complexes, 31

Mineralocorticoid(s)
  receptor(s)
    in the central nervous system, 179

Neurosteroids
  molecular mechanisms of action and psychopharmacological significance of, 163
Neurotrophins
  during neural development, 169

Ovalbumin
promoter-transcription factors of, and their regulation in the chicken, 81
p23
the involvement of, in the assembly of progesterone receptor complexes, 31
Peptide hormones
role of, in the regulation of human prostatic tumor growth, 107
Progesterone
diverse modes of action of, and its metabolites, 209
receptor(s)
A and B protein expression in human breast cancer, 93
reproductive phenotypes of, null mutant mouse, 67
the involvement of p23, hsp90, and immunophilins in the assembly of, complexes, 31
Promoter-transcription factors
chicken ovalbumin upstream, and their regulation in the chicken, 81
Prostate cancer
P450-dependent enzymes as targets for, therapy, 133
Prostatic cancer
role of growth factors, steroid and peptide hormones in the regulation of human, tumor growth, 107
26S Proteasome
a component of the, binds an orphan member of the nuclear hormone receptor superfamily, 23
Receptor(s)
androgen(s)
mediated growth control of breast cancer and endometrial cancer modulated by antiandrogen- and androgen-like steroids, 113
1α,25-dihydroxyvitamin D_3
differing shapes of, function as ligands for the D-binding protein, nuclear receptor and membrane receptor, 13
estrogen(s)
alternative splicing of the, primary transcript normally occurs in, -positive tissues and cell lines, 99
role of the, in tumor progression, 87
intracellular
discovery of novel, modulating drugs, 61
mineralocorticoid
in the central nervous system, 179
nuclear
differing shapes of 1α,25-dihydroxyvitamin D_3 function as ligands for the, 13
enhancement of, transcriptional signalling, 39
neurotrophin(s)
during neural development, 169
progesterone
A and B protein expression in human breast cancer, 93
reproductive phenotypes of, null mutant mouse, 67
the involvement of p23, hsp90, and immunophilins in the assembly of, complexes, 31
26S proteasome
binds an orphan member of the nuclear hormone receptor superfamily, 23
retinoic acid
synergistic and cell-specific activation by, 119
steroid hormone
interaction of, with transcription factors involves chromatin remodelling, 47
intracellular traffic of, 3
Retinoic acid
receptor(s)
a role for cofactors in synergistic and cell-specific activation by, 119
Steroid hormone(s)
receptor(s)
intracellular traffic of, 3
role of, in the regulation of human prostatic tumor growth, 107

Testosterone
effects of, on aromatase-immunoreactive cells in the quail brain, 185
Transcription factors
interaction of steroid hormone receptors with, involves chromatin remodelling, 47
Transcriptional signalling
enhancement of nuclear receptor, 39
